Female Authorship Concordance in *Academic Pediatrics*

Guggenmos RA, Bettenhausen JL, Markham JL

Children's Mercy
KANSAS CITY

Research Institute

Background

- Gender disparities in medicine and academia
- As of 2021, 73.6% of board-certified general pediatricians identify as female

Year: 1935

	1935	
	Count	%
Female	9	3.5%
Male	251	96.5%
Total	260	100.0%

Year: 2021

	2021	
	Count	%
Female	2,090	73.6%
Male	748	26.3%
Prefer not to answer, Non..	3	0.1%
Total	2,841	100.0%

Background (cont.)

- Growth of female workforce over time is not reflected in publication practices
- Gender based differences in scholarly achievement likely contribute to well-documented gender gap

Background (cont.)

- Little is known regarding gender distribution of first and senior authorship in pediatric journals
- *Academic Pediatrics* is one high-impact, general pediatrics journal focused on bolstering medical education and research of academic pediatricians

Objectives

In Academic Pediatrics to:

1. Identify gender distributions of first and senior authors
2. Explore changes in gender-based authorship over time
3. Assess gender concordance between first and senior authors

Methods: Study Design

- Retrospective cross-sectional study
- *Academic Pediatrics* publications from 2015-2021
- Included:
 - Original research
 - Educational research
 - Invited content (perspectives or commentaries)
 - Review articles (narrative or systematic)
 - Other articles (unclassified)
- Excluded:
 - Unable to identify gender (n=3)
 - PAS abstracts

Methods: Analysis

- Numbers, proportions, and types of articles authored by first and senior authors based on gender
- Changes in proportion over time using Cochran-Armitage test
- Gender concordance between first and senior authors
- P values <0.05 were considered statistically significant

Results

- Total 1,179 articles
 - 97 articles only had one author
- Top three article types included:
 - Original research (53.9%)
 - Education articles (19.3%)
 - Invited content (17.1%)

Table 1. Gender distribution of first and senior authors overall and by article type in *Academic Pediatrics*

	First Author		Senior Author	
	Female	Male	Female	Male
Overall (N=1179; Single Author N=97)	808 (68.5%)	371 (31.5%)	607 (56.1%)	475 (43.9%)
Original Research (N=635; Single Author N=4)	458 (72.1%)	177 (27.9%)	343 (54.4%)	288 (45.6%)
Educational Research (N=227; Single Author N=1)	159 (70.0%)	68 (30.0%)	142 (62.8%)	84 (37.2%)
Invited Content (N=202; Single Author N=72)	119 (58.9%)	83 (41.1%)	73 (56.2%)	57 (43.8%)
Review Articles (N=38; Single Author N=0)	20 (52.6%)	18 (47.4%)	23 (60.5%)	15 (39.5%)
Other Articles (N=77; Single Author N=20)	52 (67.5%)	25 (32.5%)	26 (45.6%)	31 (54.4%)

Figure 1. Changes in authorship in *Academic Pediatrics* by gender over time

Table 2. Gender concordance overall and by article type in *Academic Pediatrics*

	Gender Concordance	
	Female FA: Female SA	Female FA: Male SA
Overall (N=1082)	450 (41.6%)	302 (27.9%)
Original Research (N=631)	265 (42.0%)	190 (30.1%)
Educational Research (N=226)	105 (46.5%)	53 (23.4%)
Invited Content (N=130)	46 (35.4%)	31 (23.8%)
Review Articles (N=38)	12 (31.6%)	8 (21.1%)
Other Articles (N=57)	22 (38.6%)	20 (35.1%)

Table 2. Gender concordance overall and by article type in *Academic Pediatrics*

	Gender Concordance	
	Female FA: Female SA	Female FA: Male SA
Overall (N=1082)	450 (41.6%)	302 (27.9%)
Original Research (N=631)	265 (42.0%)	190 (30.1%)
Educational Research (N=226)	105 (46.5%)	53 (23.4%)
Invited Content (N=130)	46 (35.4%)	31 (23.8%)
Review Articles (N=38)	12 (31.6%)	8 (21.1%)
Other Articles (N=57)	22 (38.6%)	20 (35.1%)

Limitations

- Inadequate time to assess trends
- Challenges in classification of article types
- Rare instances of being unable to identify gender

Conclusions

- Female first authorship is well represented within *Academic Pediatrics*
- Women remain underrepresented in senior research roles
 - 56% of senior authors compared to 73.6% of workforce
- Overall, more publications authored by female first and senior authors over time

Conclusions (cont.)

- The role of gender concordance in senior mentorship
- Investing in career development of women may reduce gender disparities
- What barriers might exist?

Future Directions

- More support for the early researcher
- Efforts to recruit and retain female researchers may:
 - Reduce gender-based inequity in authorship and advancement opportunity
 - Improve diversity of research teams
 - Cultivate substantial improvement in career trajectory and leadership projections

Acknowledgments

- Jessica Markham, MD
- Jessica Bettenhausen, MD
- Special thanks to Leesa Brown from the Division of PHM who helped curate data for this project
