Osteochondritis Dissecans

- Subchondral bone weakening
- Most common: Medial femoral condyle
- Premature osteoarthritis¹
- Black children with 6.7x higher odds of unsuccessful radiographic healing²

Childhood Opportunity Index 2.0

- 3 domains:
 - Education
 - Health & Environment
 - Social & Economic
- Total score → Pentiles
- Metro, State, and National-based norms

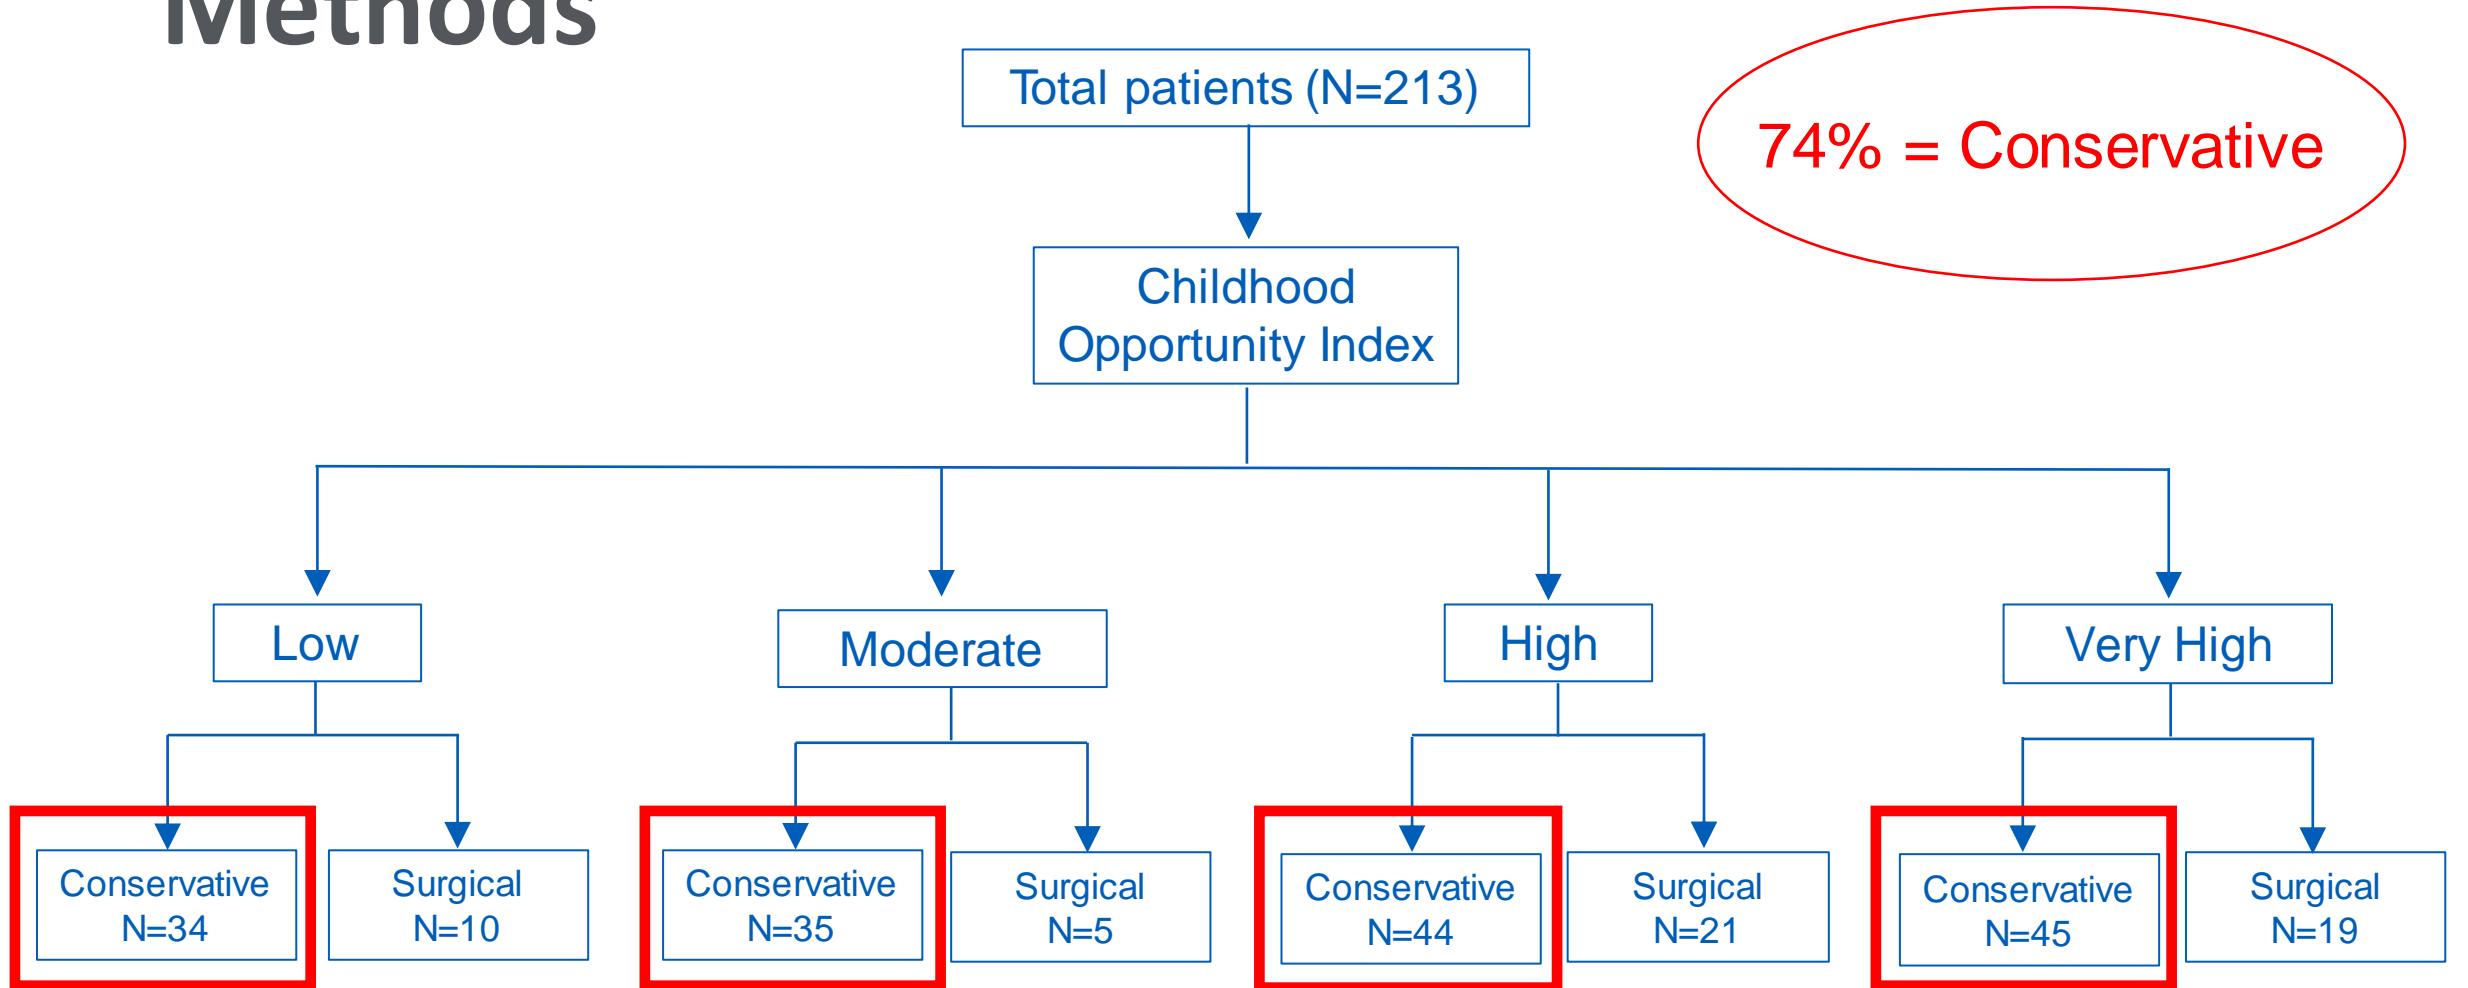

Objective

We aim to explore the relationship that **Childhood Opportunity Index** has on **treatment outcomes** of OCD of the medial femoral condyle of the knee

Methods

- Retrospective cohort study
- Age \leq 18 years
- Jan 2015-July 2023
- Dx: Medial Femoral Condyle OCD

Methods

Methods

Primary outcome:

- Failure of conservative management

Secondary outcome:

- Demographics
- Return to activity/sport
- Lost to follow-up
- Physical therapy

Results

Initial conservative management (N=158)					
	Low (N=34)	Moderate (N=35)	High (N=44)	Very High (N=45)	p-value
Sex -- n (%)					0.474
Female	14 (41.2%)	9 (25.7%)	13 (29.5%)	17 (37.8%)	
Male	20 (58.8%)	26 (74.3%)	31 (70.5%)	28 (62.2%)	
Race					0.007
African American or Black	11 (32.4%)	10 (28.6%)	6 (13.6%)	4 (8.9%)	
White	18 (52.9%)	18 (51.4%)	34 (77.3%)	39 (86.7%)	
Other	4 (14.7%)	7 (20.0%)	4 (9.1%)	2 (4.4%)	
Patient age -- median [IQR]	10.5 [9.0, 12.0]	11.0 [9.0, 12.0]	11.0 [10.0, 12.5]	11.0 [10.0, 12.0]	0.791
BMI -- median [IQR]	19.2 [16.7, 22.6]	21.3 [18.7, 24.4]	19.5 [17.3, 21.0]	17.7 [16.5, 18.6]	<0.001
No sports participation	12 (40.0%)	8 (26.7%)	7 (17.5%)	5 (12.2%)	0.041

Results

Initial conservative management (N=158)					
	Low (N=34)	Moderate (N=35)	High (N=44)	Very High (N=45)	p-value

Lost to follow-up -- n (%)	12 (35.3%)	16 (47.1%)	16 (36.4%)	14 (31.1%)	0.533

Conclusions

1. Return to sport & PT attendance significantly impacted by COI
2. Very high COI = white, lower BMI, sports participation
3. Low COI = trend towards longer duration until surgery performed

Significance

- Health disparities exist with knee MFC OCD
- Etiology is complex & multifactorial
- Need improved screening & improved access to resources
- Acknowledge potential unconscious bias

Limitations

- Lesion stability not analyzed
- Addresses may have changed
- COI very low + low combined
- Single center study

NEXT STEP:

ASSESS LESION STABILITY
